Maximum permitted rating of lamp

The information in the table is a guide to the user of lampholders marked T1 or T2 with tungsten filament lamps, although it should be appreciated that the critical factor is the actual temperature of the cap of the lamp when in use. Technical information on such temperatures is contained in this specification and in BS EN 60598-1. It is also important to ensure that the wattage rating of the lamp is not higher than that for which the particular shade or luminaire is designed. This maximum rating in watts is marked on all shades and luminaires that comply with BS4533: Part 101.

The recommendations in the table refer to typical conditions, in single lamp luminaires or installations, and in multi lamp luminaires having widely spaced lamps. Where lamps are in close proximity to each other, or in totally enclosed luminaires, it is recommended that T2 lampholders are used.

| Size | ampholder |  | Typical conditions of use |  |  |  | Maximum permitted |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Type of shade |  | Lamp position |  |  |
|  | Type | Temperature | Closed | Open | Cap up | Cap | rating of lamp |
| SBC | B15d | T1 |  | $\square$ | $\square$ |  | 40W |
| SBC | B15d | T2 |  |  | $\square$ |  | 60W |
| BC | B22d | T1 |  | - | $\square$ | - | 60 W |
| BC | B22d | T1 | - |  | $0$ | - | 100W |
| BC | B22d | T1 |  | - | - |  | 150W |
| BC | B22d | T1 | - |  | - |  | 200W |
| BC | B22d | T2 |  |  | $\square$ |  | 200W |

Cap up Position of lamp, typically when suspended from the ceiling by a flexible cord
BC Standard bayonet cap (international type B22d)
T1 Lampholder suitable for conditions up to a lamp cap temperature of $165^{\circ} \mathrm{C}$
T2 Lampholder suitable for conditions up to a lamp cap temperature of $210^{\circ} \mathrm{C}$
Closed shade Shade open at one end only and generally mounted directly on the lampholder
Open shade Shade open at both ends, and generally mounted on the lampholder by a wire frame

Cap down Position of lamp, typically when fitted on a standard or table lamp
Where two symbols are shown together, as in
Where two symbols are shown together, as in
B15d-T1/T2 or B22d-T2, there is no restriction on B15d-T1/T2 or B22d-T2, there is no restriction on
the type of shade or the position of the lamp, prothe type of shade or the position of the lamp, pro-
vided the maximum working temperatures are not exceeded
If in doubt regarding the choice of any lampholder, always use one marked T2

## CFL COMPACT FLUORESCENT LAMPHOLDER

The design of the Lampholder accepts an industry standard 4 pin 10/13 Watt Compact Fluorescent G24 lamp. This reduces the power consumption, when compared to an equivalent incandescent lamp, by up to $80 \%$.
The Lampholder is designed to European standards and has a diameter of 42 mm , which is larger than the typical Lampholder which is 29 mm .
A Safety feature which protects the installation will disconnect the supply to the Lampholder:-
During a lamp change, when no lamp is present, or in the case of lamp failure at the end of lamp life.
This Safety feature is reset by switching the supply to the fitting off for 10 to 15 seconds.

## TECHNICAL CAPACITIES (mm²)

The following table summarises the terminal capacities of the principal wiring accessories.

Description
Conductor size

| 10AX switches | $4 \times 1 \mathrm{~mm}^{2}, 3 \times 1.5 \mathrm{~mm}^{2}, 2 \times 2.5 \mathrm{~mm}^{2}$ |
| :--- | :--- |
| 20A DP switch | $3 \times 2.5 \mathrm{~mm}^{2}, 2 \times 4.0 \mathrm{~mm}^{2}, 1 \times 6.0 \mathrm{~mm}^{2}, 1 \times 10 \mathrm{~mm}^{2}$ |
| 45A DP switch | $2 \times 6.0 \mathrm{~mm}^{2}, 1 \times 10 \mathrm{~mm}^{2}, 1 \times 16 \mathrm{~mm}^{2}$ |
| 13A socket outlet | $3 \times 2.5 \mathrm{~mm}^{2}, 2 \times 4.0 \mathrm{~mm}^{2}$ |

13A fused connection unit $3 \times 2.5 \mathrm{~mm}^{2}, 2 \times 4.0 \mathrm{~mm}^{2}$

## RECOMMENDED QUANTITY OF SOCKET OUTLETS FOR DOMESTIC INSTALLATIONS

An installation may have too few socket outlets or the existing socket outlets may be incorrectly situated. Both conditions are symptomatic of an inadequate installation which could lead to potentially dangerous improvisation.

The following is a summary of the recommendations of the Electrical Installation Industry Liaison Committee.All socket outlets should be of the twin switched type.

Room
Number of sockets

| Kitchen | 6 |
| :--- | :--- |
| Lounge | 6 |
| Dining room | 4 |
| Double bedroom | 4 |
| Single bed-sitting room | 4 |
| Single bedroom | 1 |
| Landing/Stairs | 2 |
| Hall | 2 |
| Garage | 2 |

All units are supplied complete with factory fitted main switch and/or RCCB, top mounted neutral and earth bars, associated busbars, Installation Instructions and circuit identification labels.

In split-load units the main switch is fitted on the left of the unit and the RCCB on the right making the selection of split between RCCB and the main switch easier to configure on site.

All outgoing MCBs and RCBOs fit securely onto full DIN rail with main connections made by means of a specially designed comb busbar which can be cut to length required.

This method enables the installer to assemble units to suit the circuit requirements of each installation and affords maximum flexibility.
